Frontend Software Engineer specializing in React, Typescript and scalable frontend architecture. Experienced building AI applications, ERP systems, real-time dashboards and high-performance web platforms. Prioritizing maintainability, system design and translating complex business workflows into intuitive user experience.

Core Skills

Frontend	React TypeScript Angular JavaScript (ES6+) HTML CSS3 State Management
Architecture	Component Architecture Design Patterns System Design Caching Real-Time Apps
Backend & APIs	REST APIs ASP.NET Core JWT PostgreSQL Authentication ERP Data Modeling
AI & Tooling	AI Product Development Prompt Engineering Claude Cursor MCP API integration

Experience

- NittBit (Part time since May)

January 2025 - Present

 - Led Frontend Development on 2 web applications and product showcase [website](#)
 - Built a customizable dashboard platform using Zustand and explicit widget state machines, enabling enterprise users to configure real-time operational dashboards without code
 - Implemented TTL caching and a custom SSE streaming client over Fetch Readable Streams (bypassing Axios) for efficient real-time data delivery
- GNOS Records (Contract)

2025 - Present (maintaining website)

 - Designed and developed the official website from concept to deployment using Vite and React
 - Built a Zod-validated MDX content pipeline with a custom markdown preprocessor
 - Created interactive nostalgic website that reflects the brand's identity
- JuraTech Group (Full Time)

November 2025 - Jun 2026

 - Migrated legacy Visual Basic desktop ERP to Angular 20 SPA in ASP.NET Core, split into two lazy-loaded modules (Office & Workshop) improving performance and maintainability
 - Built a Product Configurator using Strategy and Factory patterns across 18 product types and 700+ materials
 - Mentored backend developer during migration
 - Implemented a hybrid state model and an SVG blueprint vizualization engine for complex configurations
 - Integrated and implemented specific and strict business rules for manufacturing window-related products
- Melany Software (Full Time)

January 2023 - December 2024

 - Maintained Visual Basic ERP software with new integrations, modules and re-optimized old code
 - Optimized PostgreSQL database queries with SQL functions and business logic
 - Developed UML diagrams, algorithms and experienced communication and integration with 3rd party developers from Europe
 - Built JAVA CLI apps that CRON/Task Scheduler run everyday ([Reportify and CER on github](#))

Education

(2023 - Present) - Electronics and Telecommunications: The School of Electrical and Computer Engineering, Belgrade
(2021 - 2023) - Business Informatics: Faculty of Economics, Banja Luka
